DETAILED ACTION

Election/Restrictions

1. Applicant's election of the invention of Group II, readable on claims 7-17, in the reply filed on September 8, 2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 1-6 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on September 8, 2006.
3. Claim 17 link(s) inventions I and II. The restriction requirement between the linked inventions is **subject to** the nonallowance of the linking claim(s), claim 17. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking claim,

Art Unit: 3652

such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 7-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson (4,413,034) in view of Kaufman (5,192,106).

Anderson discloses a method of manually manipulating a data storage disc using a device having opposing flat padded surfaces to engage the data storage surfaces on either side of the disc. Anderson's patent describes the use of its device in handling phonograph record disc rather than "optical" data storage discs or compact discs as called for in the claims of the instant application.

However, it is old and well known to remove a compact disc from its jewel case using a grasping tool, as is shown in the Kaufman patent, so as to "eliminate fingerprints and avoid potential damage" (col. 1, lines 15 and 16).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use Anderson's device for grasping and manipulating a compact disc as it is transferred from its jewel case to a CD player or the like, as taught

by Kaufman, in order to avoid direct contact between a user's fingers and the data storage surface of the disc.

In regard to claims 11 and 16, Anderson shows embodiments in Figures 2, 3, 9, and 10 having one padded surface overhanging the other padded surface.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schweizer and Webster et al. show flexible manipulators for handling data storage discs.
